INTRODUCTION
PROJECT OVERVIEW

This Community Health Needs Assessment, a follow-up to a similar study conducted in 2019, is a systematic, data-driven approach to determining the health status, behaviors, and needs of residents in the service area of Mountainside Medical Center. Subsequently, this information may be used to inform decisions and guide efforts to improve community health and wellness.

A Community Health Needs Assessment provides information so that communities may identify issues of greatest concern and decide to commit resources to those areas, thereby making the greatest possible impact on community health status.

This assessment for Mountainside Medical Center is part of a regional project conducted by Professional Research Consultants, Inc. (PRC) for Hackensack Meridian Health on behalf of its network hospitals. PRC is a nationally recognized health care consulting firm with extensive experience conducting Community Health Needs Assessments in hundreds of communities across the United States since 1994.

Methodology

This assessment incorporates data from multiple sources, including primary research (through the PRC Community Health Survey and PRC Online Key Informant Survey), as well as secondary research (vital statistics and other existing health-related data). It also allows for trending and comparison to benchmark data at the state and national levels.

PRC Community Health Survey

Survey Instrument

The survey instrument used for this study is based largely on the Centers for Disease Control and Prevention (CDC) Behavioral Risk Factor Surveillance System (BRFSS), as well as various other public health surveys and customized questions addressing gaps in indicator data relative to health promotion and disease prevention objectives and other recognized health issues. The final survey instrument was developed by Hackensack Meridian Health and PRC and is similar to the previous survey used in the region, allowing for data trending.

Community Defined for This Assessment

The study area for the survey effort (referred to as the “Mountainside Medical Center Service Area,” “MMC Service Area,” or “MMC” in this report) is defined as each of the residential ZIP Codes comprising the primary service area of Mountainside Medical Center. This community definition, determined based on the ZIP Codes of residence of most recent patients, is illustrated in the following map.
Sample Approach & Design

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the PRC Community Health Survey. Thus, to ensure the best representation of the population surveyed, a mixed-mode methodology was implemented. This included targeted surveys conducted by PRC via telephone (landline and cell phone) or through online questionnaires, as well as a community outreach component promoted by the study sponsors through social media posting and other communications.

**RANDOM-SAMPLE SURVEYS (PRC)** ➤ For the targeted administration, PRC administered 310 surveys at random throughout the service area.

**COMMUNITY OUTREACH SURVEYS** (Hackensack Meridian Health) ➤ PRC also created a link to an online version of the survey, and Hackensack Meridian Health promoted this link throughout the various communities in order to drive additional participation and bolster overall samples. This yielded an additional three surveys to the overall sample.

In all, **313 surveys were completed through these mechanisms**. Once the interviews were completed, these were weighted in proportion to the actual population distribution so as to appropriately represent the MMC Service Area as a whole. All administration of the surveys, data collection, and data analysis was conducted by PRC.

For statistical purposes, for questions asked of all respondents, the maximum rate of error associated with a sample size of 313 respondents is ±5.7% at the 95 percent confidence level.

Sample Characteristics

To accurately represent the population studied, PRC strives to minimize bias through application of a proven telephone methodology and random-selection techniques. While this random sampling of the population produces a highly representative sample, it is a common and preferred practice to “weight” the raw data to improve this representativeness even further. This is accomplished by adjusting the results of a random sample to match the geographic distribution and demographic characteristics of the population surveyed (poststratification), so as to eliminate any naturally occurring bias.

The following chart outlines the characteristics of the MMC Service Area sample for key demographic variables, compared to actual population characteristics revealed in census data. [Note that the sample consisted solely of area residents age 18 and older; data on children were given by proxy by the person}
most responsible for that child’s health care needs, and these children are not represented demographically in this chart.

### Population & Survey Sample Characteristics
(MMC Service Area, 2022)

<table>

<td>23.3%</td>
</tr>
</tbody>
</table>

**Notes:**
- FPL is federal poverty level, based on guidelines established by the US Department of Health & Human Services.

The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in the defined area with a high degree of confidence.

### INCOME & RACE/ETHNICITY

**INCOME**
- Poverty descriptions and segmentation used in this report are based on administrative poverty thresholds determined by the US Department of Health & Human Services. These guidelines define poverty status by household income level and number of persons in the household (e.g., the 2021 guidelines place the poverty threshold for a family of four at $26,500 annual household income or lower). In sample segmentation: “low income” refers to community members living in a household with defined poverty status or living just above the poverty level, earning up to twice (<200% of) the poverty threshold; “mid/high income” refers to those households living on incomes which are twice or more (≥200% of) the federal poverty level.

**RACE & ETHNICITY**
- In analyzing survey results, mutually exclusive race and ethnicity categories are used. All Hispanic respondents are grouped, regardless of identity with any other race group. Other race categories are non-Hispanic categorizations (e.g., “White” reflects non-Hispanic White respondents).

### Online Key Informant Survey

To solicit input from key informants, those individuals who have a broad interest in the health of the community, an Online Key Informant Survey also was implemented as part of this process. A list of recommended participants was provided by Hackensack Meridian Health for Mountainside Medical Center; this list included names and contact information for physicians, public health representatives, other health professionals, social service providers, and a variety of other community leaders. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall.
Key informants were contacted by email, introducing the purpose of the survey and providing a link to take the survey online; reminder emails were sent as needed to increase participation. In all, 37 community stakeholders took part in the Online Key Informant Survey, as outlined below:

<table>
<thead>
<tr>
<th>KEY INFORMANT TYPE</th>
<th>NUMBER PARTICIPATING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physicians</td>
<td>11</td>
</tr>
<tr>

<td>6</td>
</tr>
<tr>
<td>Other Health Providers</td>
<td>7</td>
</tr>
<tr>
<td>Social Services Providers</td>
<td>3</td>
</tr>
<tr>
<td>Other Community Leaders</td>
<td>10</td>
</tr>
</tbody>
</table>

Final participation included representatives of the organizations outlined below.

- American Cancer Society
- Bloomfield Township Health & Human Services
- Glen Ridge Township
- Glen Ridge Volunteer Ambulance Squad
- Hackensack Meridian School of Medicine
- Horizon Blue Cross Blue Shield of NJ
- Imaging Subspecialists of North NJ, LLC
- Montclair Emergency Services for the Homeless
- Montclair Health and Wellness Partnership
- Montclair Health Department
- Montclair National Association for the Advancement of Colored People
- Montclair State University School of Nursing
- Montclair Young Men’s Christian Association
- Mountainside Medical Center
- New Jersey State Library Talking Book & Braille Center
- Nutley Township
- Nutley Volunteer Emergency Medical Services
- Our Lady of the Lake Parish
- Partners for Health
- Robert D. McCormick Center for Child Advocacy
- Salvation Army, Montclair
- The Arc of Essex County
- Township of Clifton
- Township of Montclair
- Township of Verona
- United Way Union County

Through this process, input was gathered from several individuals whose organizations work with low-income, minority, or other medically underserved populations.

In the online survey, key informants were asked to rate the degree to which various health issues are a problem in their own community. Follow-up questions asked them to describe why they identify problem areas as such and how these might better be addressed. Results of their ratings, as well as their verbatim comments, are included throughout this report as they relate to the various other data presented.
NOTE ► These findings represent qualitative rather than quantitative data. The Online Key Informant Survey was designed to gather input regarding participants’ opinions and perceptions of the health needs of the residents in the area.

Public Health, Vital Statistics & Other Data
A variety of existing (secondary) data sources was consulted to complement the research quality of this Community Health Needs Assessment. Data for the MMC Service Area were obtained from the following sources (specific citations are included with the graphs throughout this report):

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension, SparkMap (sparkmap.org)
- Centers for Disease Control & Prevention, Office of Infectious Disease, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention
- Centers for Disease Control & Prevention, Office of Public Health Science Services, Center for Surveillance, Epidemiology and Laboratory Services, Division of Health Informatics and Surveillance (DHIS)
- Centers for Disease Control & Prevention, Office of Public Health Science Services, National Center for Health Statistics
- ESRI ArcGIS Map Gallery
- National Cancer Institute, State Cancer Profiles
- OpenStreetMap (OSM)
- US Census Bureau, American Community Survey
- US Census Bureau, County Business Patterns
- US Census Bureau, Decennial Census
- US Department of Agriculture, Economic Research Service
- US Department of Health & Human Services
- US Department of Health & Human Services, Health Resources and Services Administration (HRSA)
- US Department of Justice, Federal Bureau of Investigation
- US Department of Labor, Bureau of Labor Statistics
- New Jersey Department of Public Health

Note that secondary data for the MMC Service Area reflect county-level data for Essex County in New Jersey.

Benchmark Data
Trending
A similar survey was administered in the MMC Service Area in 2019 by PRC on behalf of Hackensack Meridian Health. Trending data, as revealed by comparison to prior survey results, are provided throughout this report whenever available (however, note that the geographic service area definition has changed slightly since the 2019 survey data were collected). Historical data for secondary data indicators in Essex County are also included for the purposes of trending.
Regional Data

Because this assessment was part of a broader, regional project conducted by Hackensack Meridian Health (HMH), a regional benchmark for survey indicators is available that represents all of the ZIP Codes in the primary service areas of HMH hospitals throughout central and northern New Jersey. Secondary data for the HMH Service Area are drawn from Essex, Burlington, Camden, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Somerset, Sussex, Union, and Warren counties.

New Jersey Risk Factor Data

Statewide risk factor data are provided where available as an additional benchmark against which to compare local survey findings; these data represent the most recent BRFSS (Behavioral Risk Factor Surveillance System) Prevalence and Trends Data published online by the Centers for Disease Control and Prevention. State-level vital statistics are also provided for comparison of secondary data indicators.

Nationwide Risk Factor Data

Nationwide risk factor data, which are also provided in comparison charts, are taken from the 2020 PRC National Health Survey; the methodological approach for the national study is similar to that employed in this assessment, and these data may be generalized to the US population with a high degree of confidence. National-level vital statistics are also provided for comparison of secondary data indicators.

Healthy People 2030

Healthy People provides 10-year, measurable public health objectives — and tools to help track progress toward achieving them. Healthy People identifies public health priorities to help individuals, organizations, and communities across the United States improve health and well-being. Healthy People 2030, the initiative’s fifth iteration, builds on knowledge gained over the first four decades.

Healthy People 2030’s overarching goals are to:

- Attain healthy, thriving lives and well-being free of preventable disease, disability, injury, and premature death.
- Eliminate health disparities, achieve health equity, and attain health literacy to improve the health and well-being of all.
- Create social, physical, and economic environments that promote attaining the full potential for health and well-being for all.
- Promote healthy development, healthy behaviors, and well-being across all life stages.
- Engage leadership, key constituents, and the public across multiple sectors to take action and design policies that improve the health and well-being of all.

The Healthy People 2030 framework was based on recommendations made by the Secretary’s Advisory Committee on National Health Promotion and Disease Prevention Objectives for 2030. After getting feedback from individuals and organizations and input from subject matter experts, the U.S. Department of Health and Human Services (HHS) approved the framework which helped guide the selection of Healthy People 2030 objectives.

Information Gaps

While this assessment is quite comprehensive, it cannot measure all possible aspects of health in the community, nor can it adequately represent all possible populations of interest. It must be recognized that these information gaps might in some ways limit the ability to assess all of the community’s health needs.

For example, certain population groups — such as the homeless, institutionalized persons, or those who only speak a language other than English or Spanish — are not represented in the survey data. Other population groups — for example, pregnant women, lesbian/gay/bisexual/transgender residents,
undocumented residents, and members of certain racial/ethnic or immigrant groups — might not be identifiable or might not be represented in numbers sufficient for independent analyses.

In terms of content, this assessment was designed to provide a comprehensive and broad picture of the health of the overall community. However, there are certainly medical conditions that are not specifically addressed.

Public Comment

Mountainside Medical Center made its prior Community Health Needs Assessment (CHNA) report publicly available on its website; through that mechanism, the hospital requested from the public written comments and feedback regarding the CHNA and implementation strategy. At the time of this writing, Mountainside Medical Center had not received any written comments. However, through population surveys and key informant feedback for this assessment, input from the broader community was considered and taken into account when identifying and prioritizing the significant health needs of the community. Mountainside Medical Center will continue to use its website as a tool to solicit public comments and ensure that these comments are considered in the development of future CHNAs.
IRS Form 990, Schedule H Compliance

For non-profit hospitals, a Community Health Needs Assessment (CHNA) also serves to satisfy certain requirements of tax reporting, pursuant to provisions of the Patient Protection & Affordable Care Act of 2010. To understand which elements of this report relate to those requested as part of hospitals’ reporting on IRS Schedule H (Form 990), the following table cross-references related sections.

SUMMARY OF FINDINGS

Significant Health Needs of the Community

The following “Areas of Opportunity” represent the significant health needs of the community, based on the information gathered through this Community Health Needs Assessment. From these data, opportunities for health improvement exist in the area with regard to the following health issues (see also the summary tables presented in the following section).

The Areas of Opportunity were determined after consideration of various criteria, including: standing in comparison with benchmark data (particularly national data); identified trends; the preponderance of significant findings within topic areas; the magnitude of the issue in terms of the number of persons affected; and the potential health impact of a given issue. These also take into account those issues of greatest concern to the community stakeholders (key informants) giving input to this process.

AREAS OF OPPORTUNITY IDENTIFIED THROUGH THIS ASSESSMENT

| ACCESS TO HEALTH CARE SERVICES | ▪ Barriers to Access  
| | – Inconvenient Office Hours  
| | – Appointment Availability  
| | – Finding a Physician  
| | ▪ Specific Source of Ongoing Medical Care  
| | ▪ Eye Exams  
|  
| CANCER | ▪ Leading Cause of Death  
| | ▪ Cancer Incidence  
| | – Including Prostate Cancer  
| | ▪ Female Breast Cancer Screening [Age 50-74]  
| | ▪ Colorectal Cancer Screening [Age 50-75]  
|  
| DIABETES | ▪ Prevalence of Borderline/Pre-Diabetes  
| | ▪ Kidney Disease Deaths  
|  
| HEART DISEASE & STROKE | ▪ Leading Cause of Death  
| | ▪ Overall Cardiovascular Risk  
|  
| INFANT HEALTH & FAMILY PLANNING | ▪ Prenatal Care  
|  
| INJURY & VIOLENCE | ▪ Unintentional Injury Deaths  
| | ▪ Homicide Deaths  
| | ▪ Violent Crime Rate  
|  
| MENTAL HEALTH | ▪ “Fair/Poor” Mental Health  
| | ▪ Symptoms of Chronic Depression  
| | ▪ Mental Health Provider Ratio  
| | ▪ Key Informants: Mental health ranked as a top concern.

### Community Feedback on Prioritization of Health Needs

**Key Informant Input.** Prioritization of the health needs identified in this assessment (“Areas of Opportunity” above) was initially determined based on a prioritization exercise conducted among community stakeholders (representing a cross-section of community-based agencies and organizations) in conjunction with the administration of the Online Key Informant Survey.

In this process, these key informants were asked to rate the severity of a variety of health issues in the community. Insofar as these health issues were identified through the data above and/or were identified as top concerns among key informants, their ranking of these issues informed the following priorities:

1. Mental Health  
2. Substance Abuse  
3. Nutrition, Physical Activity & Weight  
4. Diabetes  
5. Heart Disease & Stroke  
6. Respiratory Disease  
7. Potentially Disabling Conditions  
8. Infant Health & Family Planning  
9. Injury & Violence  
10. Sexual Health  
11. Access to Health care Services  
12. Cancer

Not prioritized within the list above is **Social Determinants of Health**, which was not specifically addressed in the Online Key Informant Survey.
Community Forums. Throughout the week of August 15, 2022, Hackensack Meridian Health convened a series of meetings with its network hospitals and community partners to review and discuss the findings of this assessment. At that time, it was determined to address the issues identified above within the network’s reframed priority areas as follows, each viewed through the lens of health equity and social determinants:

- **Mental Wellbeing** *(e.g., behavioral health, mental health, substance use, stress, ACEs)*
- **Healthy Living** *(e.g., chronic disease, prevention, and awareness)*
- **Access to Care** *(e.g., health insurance, transportation, availability/capacity of providers)*

Hospital Implementation Strategy
Mountainside Medical Center will use the information from this Community Health Needs Assessment to develop an Implementation Strategy to address the significant health needs in the community. While the hospital will likely not implement strategies for all of the health issues listed above, the results of this prioritization exercise will be used to inform the development of the hospital’s action plan to guide community health improvement efforts in the coming years.

Note: An evaluation of the hospital’s past activities to address the needs identified in prior CHNAs can be found as an appendix to this report.
## Summary Tables: Comparisons With Benchmark Data

The following tables provide an overview of indicators in the service area of Mountainside Medical Center, grouped by health topic.

### Reading the Summary Tables

- In the following tables, MMC Service Area results are shown in the larger, gray column.
- The columns to the right of the service area column provide trending, as well as comparisons between local data and any available state and national findings, and Healthy People 2030 objectives. Symbols indicate whether the MMC Service Area compares favorably ( Worse ( ), or comparably ( ) to these external data.

---

**Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.**

**Tip:** Indicator labels beginning with a “%” symbol are taken from the PRC Community Health Survey; the remaining indicators are taken from secondary data sources.

---

### TREND SUMMARY

*(Current vs. Baseline Data)*

**SURVEY DATA INDICATORS:**

Trends for survey-derived indicators represent significant changes since 2019. Note that survey data reflect the ZIP Code-defined MMC Service Area.

**OTHER (SECONDARY) DATA INDICATORS:**

Trends for other indicators (e.g., public health data) represent point-to-point changes between the most current reporting period and the earliest presented in this report (typically representing the span of roughly a decade).

Note that secondary data reflect county-level data.

DATA CHARTS & KEY INFORMANT INPUT

The following sections present data from multiple sources, including the population-based PRC Community Health Survey, public health and other existing data sets (secondary data), as well as qualitative input from the Online Key Informant Survey.

Data indicators from these sources are intermingled and organized by health topic. To better understand the source data for specific indicators, please refer to the footnotes accompanying each chart.

Notes: Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be of any race.
Social Determinants of Health

ABOUT SOCIAL DETERMINANTS OF HEALTH

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

Social determinants of health (SDOH) have a major impact on people’s health, well-being, and quality of life. Examples of SDOH include:

- Safe housing, transportation, and neighborhoods
- Racism, discrimination, and violence
- Education, job opportunities, and income
- Access to nutritious foods and physical activity opportunities
- Polluted air and water
- Language and literacy skills

SDOH also contribute to wide health disparities and inequities. For example, people who don’t have access to grocery stores with healthy foods are less likely to have good nutrition. That raises their risk of health conditions like heart disease, diabetes, and obesity — and even lowers life expectancy relative to people who do have access to healthy foods.

Just promoting healthy choices won’t eliminate these and other health disparities. Instead, public health organizations and their partners in sectors like education, transportation, and housing need to take action to improve the conditions in people’s environments.

119,131 total persons
39,909 children

Sources:
- US Census Bureau American Community Survey 5-year estimates.

Notes:
- Poverty is considered a key driver of health status. This indicator is relevant because poverty creates barriers to access including health services, healthy food, and other necessities that contribute to poor health status.
Financial Resilience

“Suppose that you have an emergency expense that costs $400. Based on your current financial situation, would you be able to pay for this expense either with cash, by taking money from your checking or savings account, or by putting it on a credit card that you could pay in full at the next statement?”

Do Not Have Cash on Hand to Cover a $400 Emergency Expense
(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 63]

Notes: 
- Asked of all respondents.
- Includes respondents who say they would not be able to pay for a $400 emergency expense either with cash, by taking money from their checking or savings account, or by putting it on a credit card that they could pay in full at the next statement.

Pandemic Impact

“How has the coronavirus pandemic cause you or any other adult in your household to lose a job, work fewer hours than wanted or needed, or led to a loss of health insurance coverage?”

Household Member has Lost a Job, Hours/Wages, or Health Insurance as a Result of the Pandemic
(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 309]

Notes: 
- Asked of all respondents.
Education
Education levels are reflected in the proportion of our population without a high school diploma. [COUNTY-LEVEL DATA]

Population With No High School Diploma
(Population Age 25+ Without a High School Diploma or Equivalent, 2016-2020)

<table>
<thead>

</tbody>
</table>

Notes: • This indicator is relevant because educational attainment is linked to positive health outcomes.

Housing
Housing Insecurity
“In the past 12 months, how often were you worried or stressed about having enough money to pay your rent or mortgage? Would you say you were worried or stressed: always, usually, sometimes, rarely, or never?”

Frequency of Worry or Stress
Over Paying Rent or Mortgage in the Past Year
(MMC Service Area, 2022)

- Always: 10.3%
- Usually: 36.3%
- Sometimes: 24.0%
- Rarely: 21.5%
- Never: 7.9%

Sources: • 2022 PRC Community Health Survey, PRC, Inc. [Item 66]
Notes: • Asked of all respondents.
Unhealthy or Unsafe Housing

“Thinking about your current home, over the past 12 months have you experienced ongoing problems with water leaks, rodents, insects, mold, or other housing conditions that might make living there unhealthy or unsafe?”

Unhealthy or Unsafe Housing Conditions in the Past Year
(MMC Service Area, 2022)

Food Insecurity

“Now I am going to read two statements that people have made about their food situation. Please tell me whether each statement was ‘often true,’ ‘sometimes true,’ or ‘never true’ for you in the past 12 months.

- The first statement is: ‘I worried about whether our food would run out before we got money to buy more.’
- The next statement is: ‘The food that we bought just did not last, and we did not have money to get more.’

Agreement with either or both of these statements (‘often true’ or ‘sometimes true’) defines food insecurity for respondents.
Food Insecurity
(MMC Service Area, 2022)

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 112]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
- Includes adults who A) ran out of food at least once in the past year and/or B) worried about running out of food in the past year.
HEALTH STATUS

Overall Health

“Would you say that in general your health is: excellent, very good, good, fair, or poor?”

Self-Reported Health Status
(MMC Service Area, 2022)

- Excellent: 3.7%
- Very Good: 13.5%
- Good: 31.6%
- Fair: 37.2%
- Poor: 14.1%

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 5]
Notes: Asked of all respondents.

The following charts further detail “fair/poor” overall health responses in the MMC Service Area in comparison to benchmark data, as well as by basic demographic characteristics (namely by sex, age groupings, income [based on poverty status], and race/ethnicity).

Experience “Fair” or “Poor” Overall Health

Notes: Asked of all respondents.

Mental Health

ABOUT MENTAL HEALTH & MENTAL DISORDERS

About half of all people in the United States will be diagnosed with a mental disorder at some point in their lifetime. …Mental disorders affect people of all age and racial/ethnic groups, but some populations are disproportionately affected. And estimates suggest that only half of all people with mental disorders get the treatment they need.

In addition, mental health and physical health are closely connected. Mental disorders like depression and anxiety can affect people’s ability to take part in healthy behaviors. Similarly, physical health problems can make it harder for people to get treatment for mental disorders. Increasing screening for mental disorders can help people get the treatment they need.

– Healthy People 2030 (https://health.gov/healthypeople)

Mental Health Status

Self-Reported Mental Health Status

“Now thinking about your mental health, which includes stress, depression and problems with emotions, would you say that, in general, your mental health is: excellent, very good, good, fair, or poor?”
Self-Reported Mental Health Status
(MMC Service Area, 2022)

- Excellent: 3.9%
- Very Good: 18.4%
- Good: 22.8%
- Fair: 34.8%
- Poor: 20.2%

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 90]
Notes: Asked of all respondents.

Experience “Fair” or “Poor” Mental Health

MMC Service Area

Impact of the Pandemic on Mental Health

“Since the start of the pandemic, would you say or mental health has: improved, stayed about the same, or become worse?”
Mental Health Has Gotten Worse Since the Beginning of the Pandemic
(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 308]
Notes: Asked of all respondents.
Beginning of pandemic specified as March 2020.

Depression
DIAGNOSED DEPRESSION ▶ “Has a doctor, nurse, or other health professional ever told you that you have a depressive disorder, including depression, major depression, dysthymia, or minor depression?"

Have Been Diagnosed With a Depressive Disorder

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 93]
2020 PRC National Health Survey, PRC, Inc.
Notes: Asked of all respondents.
Depressive disorders include depression, major depression, dysthymia, or minor depression.
**SYMPTOMS OF CHRONIC DEPRESSION**  “Have you had two years or more in your life when you felt depressed or sad most days, even if you felt okay sometimes?”

### Have Experienced Symptoms of Chronic Depression

Notes: Asked of all respondents. “Treatment” can include taking medications for mental health.
“Was there a time in the past 12 months when you needed mental health services but were not able to get them?”

Unable to Get Mental Health Services When Needed in the Past Year
(MMC Service Area, 2022)

Key Informant Input: Mental Health
The following chart outlines key informants’ perceptions of the severity of Mental Health as a problem in the community:

Perceptions of Mental Health as a Problem in the Community
(Key Informants, 2022)

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

Hospitals are burdened with mental health patients because there are insufficient resources to address issues before an ambulance is called. Mental health patients are transferred to the hospital via ambulance simply for a meal and personal care. Mountainside takes care of these patients graciously. There should be a mental health facility to address this issue before an ambulance is called. Police do not have the resources to handle this and rely on local ambulances to transport mental health patients. – Health Provider (Essex and Passaic Counties)

Access to psychotherapy. – Physician (Essex and Passaic Counties)
Not enough programs for these people. They are just given medication and sent back on the streets. – Health Provider (Essex and Passaic Counties)

Access to practitioners when in crisis, availability of resources for youth and teens. – Community/Business Leader (Essex and Passaic Counties)

The main problem we are seeing is a lack in available services. The facilities that we have in the city are booked or backed up from the pandemic. This back up is causing many individuals not able to get the help they need regarding mental health. We are seeing an increase in needed mental health resources. – Community/Business Leader (Essex and Passaic Counties)

There are not enough available appointments. In network providers are also difficult to find. Some people are not comfortable doing virtual appointments and that seems to be what the majority is since the pandemic began. – Physician (Essex and Passaic Counties)

Access to appropriate care and long-term treatment, experienced professionals that can properly and accurately diagnose and treat, including prescription medications. – Social Service Provider (Essex and Passaic Counties)

Lack of access to help. – Social Service Provider (Essex and Passaic Counties)

Due to COVID-19

In part due to COVID, there are huge mental health issues in adults as well as adolescents and not enough resources to care for them. – Physician (Essex and Passaic Counties)

COVID and the economic crisis has resulted in mental health issues in the community. – Health Provider (Northern and Central New Jersey)

I see so many individuals dealing with stress and other mental health issues, especially coming out of the pandemic. The results from a lock down and mask wearing has had people of all ages have trouble interacting in a positive way with their peers. – Community/Business Leader (Essex and Passaic Counties)

Stressors from the current COVID-19 pandemic, uninsured, homeless residents. – Public Health Representative (Essex and Passaic Counties)

Prevalence/Incidence

Mental health has been listed as a top concern across our local communities in health needs assessments and in conversations with youth and mental health serving organizations. – Public Health Representative (Essex and Passaic Counties)

Awareness/Education

Its relationship to drug abuse causes the mental health issue to be overlooked. Lack of education regarding mental health issues including hoarding disorder. Medicaid population has trouble getting psychiatrists and other mental health practitioners due to their not taking new patients. – Public Health Representative (Essex and Passaic Counties)

Follow-Up/Support

The need for support services and counseling for individuals who struggle to get by. They can't afford private therapy. It's far greater than the capacity of nonprofit organizations that provide these services. – Public Health Representative (Essex and Passaic Counties)

Disease Management

Staying healthy, staying on medications, personal hygiene, having a place to go during the day. – Community/Business Leader (Northern and Central New Jersey)

Co-Occurences

Depression and anxiety. Depression accompanying chronic disease. Access to services. – Health Provider (Essex and Passaic Counties)

Insurance Issues

Most psychiatrists and therapists do not take any insurance. Those who do are not taking new patients. They do not get compensated for their time. – Physician (Essex and Passaic Counties)
Leading Causes of Death

Distribution of Deaths by Cause

COVID-19, heart disease, and cancers were leading causes of death in the community in 2020. [COUNTY-LEVEL DATA]

![Leading Causes of Death (MMC Service Area, 2020)]

- COVID-19: 34.1%
- Heart Disease: 23.2%
- Cancer: 18.2%
- Unintentional Injuries: 12.5%
- Stroke: 3.4%
- Diabetes: 3.4%
- Other: 5.2%

Sources: CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2022.

Notes: Lung disease is CLRD, or chronic lower respiratory disease.

Age-Adjusted Death Rates for Selected Causes

**AGE-ADJUSTED DEATH RATES**

In order to compare mortality in the region with other localities (in this case, New Jersey and the United States), it is necessary to look at rates of death — these are figures which represent the number of deaths in relation to the population size (such as deaths per 100,000 population, as is used here).

Furthermore, in order to compare localities without undue bias toward younger or older populations, the common convention is to adjust the data to some common baseline age distribution. Use of these “age-adjusted” rates provides the most valuable means of gauging mortality against benchmark data, as well as Healthy People 2030 objectives.

The following chart outlines annual average age-adjusted death rates per 100,000 population for selected causes of death in the MMC Service Area. [COUNTY-LEVEL DATA]

### Cardiovascular Disease

#### ABOUT HEART DISEASE & STROKE

Heart disease is the leading cause of death in the United States, and stroke is the fifth leading cause. …Heart disease and stroke can result in poor quality of life, disability, and death. Though both diseases are common, they can often be prevented by controlling risk factors like high blood pressure and high cholesterol through treatment.

In addition, making sure people who experience a cardiovascular emergency — like stroke, heart attack, or cardiac arrest — get timely recommended treatment can reduce their risk for long-term disability and death. Teaching people to recognize symptoms is key to helping more people get the treatment they need.

— Healthy People 2030 (https://health.gov/healthypeople)

#### Age-Adjusted Heart Disease & Stroke Deaths

The greatest share of cardiovascular deaths is attributed to heart disease. The following charts outline age-adjusted mortality rates for heart disease and for stroke in our community. [COUNTY-LEVEL DATA]
Heart Disease: Age-Adjusted Mortality Trends
(Annual Average Deaths per 100,000 Population)
Healthy People 2030 = 127.4 or Lower (Adjusted)

Prevalence of Heart Disease & Stroke

“Has a doctor, nurse, or other health professional ever told you that you had:

- A heart attack, also called a myocardial infarction?
- Angina or coronary heart disease?”

Heart disease prevalence here is a calculated prevalence that includes those responding affirmatively to either.

Prevalence of Heart Disease

Total Cardiovascular Risk

Total cardiovascular risk reflects the individual-level risk factors which put a person at increased risk for cardiovascular disease, including:

- High Blood Pressure
- High Blood Cholesterol
- Cigarette Smoking
- Physical Inactivity
- Overweight/Obesity

Modifying these behaviors and adhering to treatment for high blood pressure and cholesterol are critical both for preventing and for controlling cardiovascular disease.

The following chart reflects the percentage of adults in the MMC Service Area who report one or more of the following: being overweight; smoking cigarettes; being physically inactive; or having high blood pressure or cholesterol.

Related Issue
See also Nutrition, Physical Activity & Weight and Tobacco Use in the Modifiable Health Risks section of this report.
Among those rating this issue as a "major problem," reasons related to the following:

**Prevalence/Incidence**
- I have seen too many individuals enter the hospital from heart disease, especially men. – Community/Business Leader (Essex and Passaic Counties)
- Rates of death are high from heart disease and stroke. – Community/Business Leader (Northern and Central New Jersey)
- Essex County Statistics. – Public Health Representative (Essex and Passaic Counties)
- The county data is improving but this is still a public health issue to be addressed. – Health Provider (Essex and Passaic Counties)

**Nutrition**
- Poor diet and lack of exercise. – Public Health Representative (Essex and Passaic Counties)

**Aging Population**
- Aging population. – Social Service Provider (Essex and Passaic Counties)

**Vulnerable Populations**
- They have always been an issue in the African American community. I attribute it directly to our traditional foods, low employment, and access to good health care. – Community/Business Leader (Essex and Passaic Counties)

**Access to Care/Services**
- This is an issue for older adults and younger residents who don't have access or choose not to access routine health care visits. – Public Health Representative (Essex and Passaic Counties)
Cancer

ABOUT CANCER

Cancer is the second leading cause of death in the United States. … The cancer death rate has declined in recent decades, but over 600,000 people still die from cancer each year in the United States. Death rates are higher for some cancers and in some racial/ethnic minority groups. These disparities are often linked to social determinants of health, including education, economic status, and access to health care.

Interventions to promote evidence-based cancer screenings — such as screenings for lung, breast, cervical, and colorectal cancer — can help reduce cancer deaths. Other effective prevention strategies include programs that increase HPV vaccine use, prevent tobacco use and promote quitting, and promote healthy eating and physical activity. In addition, effective targeted therapies and personalized treatment are key to helping people with cancer live longer.

Cancer Incidence

“Incidence rate” or “case rate” is the number of newly diagnosed cases in a given population in a given year, regardless of outcome. These rates are also age-adjusted. It is usually expressed as cases per 100,000 population per year. [COUNTY-LEVEL DATA]

Cancer Incidence Rates by Site
(Annual Average Age-Adjusted Incidence per 100,000 Population, 2014-2018)

Sources:  
- State Cancer Profiles.  
Notes:  
- This indicator reports the age adjusted incidence rate (cases per 100,000 population per year) of cancers, adjusted to 2000 US standard population age groups (under age 1, 1-4, 5-9, ... 80-84, 85 and older). This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions.
Prevalence of Cancer

“Have you ever suffered from or been diagnosed with cancer?”

Prevalence of Cancer

MMC Service Area

- 2022 PRC Community Health Survey, PRC, Inc. [Item 25]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Reflects all respondents.

ABOUT CANCER RISK

Reducing the nation’s cancer burden requires reducing the prevalence of behavioral and environmental factors that increase cancer risk.

- All cancers caused by cigarette smoking could be prevented. At least one-third of cancer deaths that occur in the United States are due to cigarette smoking.
- According to the American Cancer Society, about one-third of cancer deaths that occur in the United States each year are due to nutrition and physical activity factors, including obesity.
- National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention

Related Issue

See also Nutrition, Physical Activity & Weight and Tobacco Use in the Modifiable Health Risks section of this report.
Cancer Screenings

The American Cancer Society recommends that both men and women get a cancer-related checkup during a regular doctor’s checkup. It should include examination for cancers of the thyroid, testicles, ovaries, lymph nodes, oral cavity, and skin, as well as health counseling about tobacco, sun exposure, diet and nutrition, risk factors, sexual practices, and environmental and occupational exposures.

FEMALE BREAST CANCER

The US Preventive Services Task Force (USPSTF) recommends biennial screening mammography for women aged 50 to 74 years.

CERVICAL CANCER

The US Preventive Services Task Force (USPSTF) recommends screening for cervical cancer every 3 years with cervical cytology alone in women aged 21 to 29 years. For women aged 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting). The USPSTF recommends against screening for cervical cancer in women who have had a hysterectomy with removal of the cervix and do not have a history of a high-grade precancerous lesion (i.e., cervical intraepithelial neoplasia [CIN] grade 2 or 3) or cervical cancer.

PROSTATE CANCER

The US Preventive Services Task Force (USPSTF) recommends that the decision to be screened for prostate cancer should be an individual one for men age 55 to 69 years. The USPSTF recommends against PSA-based screening in men age 70 and older.

COLORECTAL CANCER

The US Preventive Services Task Force (USPSTF) recommends screening for colorectal cancer starting at age 50 years and continuing until age 75 years.

The US Preventive Services Task Force, Agency for Health care Research and Quality, US Department of Health & Human Services

Note that other organizations (e.g., American Cancer Society, American Academy of Family Physicians, American College of Physicians, National Cancer Institute) may have slightly different screening guidelines.

Screening levels in the community were measured in the PRC Community Health Survey relative to four cancer sites: female breast cancer (mammography); cervical cancer (Pap smear testing); colorectal cancer (sigmoidoscopy and fecal occult blood testing); and prostate cancer (PSA).

BREAST CANCER SCREENING ➤ “A mammogram is an x-ray of each breast to look for cancer. How long has it been since you had your last mammogram?”

Breast cancer screening is calculated here among women age 50 to 74 who indicate mammography within the past 2 years.

CERVICAL CANCER SCREENING ➤ “A Pap test is a test for cancer of the cervix. How long has it been since you had your last Pap test?”

[If Pap test in the past five years] “HPV, or the human papillomavirus, is a common infection that can cause several types of cancer. When you received your last Pap test, were you screened for HPV?”
“Have you ever had a hysterectomy?”

“Appropriate cervical cancer screening” includes Pap smear testing (cervical cytology) every three years in women age 21 to 29 and Pap smear testing and/or HPV testing every 5 years in women age 30 to 65. Women 21 to 65 with hysterectomy are excluded.

**COLORECTAL CANCER SCREENING**

“Sigmoidoscopy and colonoscopy are exams in which a tube is inserted in the rectum to view the colon for signs of cancer or other health problems. How long has it been since your last sigmoidoscopy or colonoscopy?”

“A blood stool test is a test that may use a special kit at home to determine whether the stool contains blood. How long has it been since you had your last blood stool test?”

“Appropriate colorectal cancer screening” is calculated here among men and women age 50 to 75 years who have had a fecal occult blood test within the past year and/or a lower endoscopy (sigmoidoscopy or colonoscopy) within the past 10 years.

**PROSTATE CANCER SCREENING**

“A prostate-specific antigen test, also called a PSA test, is a blood test used to check men for prostate cancer. How long has it been since you had your last PSA test?” (Calculated here among men age 40 and older who indicate screening within the past 2 years.)

- Sources: 2022 PRC Community Health Survey, PRC, Inc. [Items 116-118, 329]
- 2020 PRC National Health Survey, PRC, Inc.
Key Informant Input: Cancer
The following chart outlines key informants’ perceptions of the severity of Cancer as a problem in the community:

Perceptions of Cancer as a Problem in the Community (Key Informants, 2022)

- Major Problem: 8.8%
- Moderate Problem: 58.8%
- Minor Problem: 17.6%
- No Problem At All: 14.7%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Diagnosis/Treatment**
Folks wait too long before seeking treatment. – Public Health Representative (Essex and Passaic Counties)
Too many people in our community still smoke, too many people either don't get the cancer screenings that they are due or overdue for, or even know they should be getting cancer screenings regularly. There is inherit bias and racism involved so there are entire communities that aren’t even being approached or educated about the need for cancer screening. We are lucky to have many cancer treatment centers in Northern and Central NJ, but navigating health systems can be very difficult, especially if English is not your first language. People are afraid of hearing they have cancer...so if they don’t go to the doctors, they won’t hear it. Also, our area is certainly affected because people are overweight, consume alcohol, and don't exercise enough. – Community/Business Leader (Northern and Central New Jersey)

**Prevalence/Incidence**
High rate of it and varied types. Too many diagnoses, very late due to lack of education on them, especially to minority communities. – Health Provider (Northern and Central New Jersey)
Essex County Cancer Statistics. – Public Health Representative (Essex and Passaic Counties)
Respiratory Disease (Including COVID-19)

ABOUT RESPIRATORY DISEASE

Respiratory diseases affect millions of people in the United States. …More than 25 million people in the United States have asthma. Strategies to reduce environmental triggers and make sure people get the right medications can help prevent hospital visits for asthma. In addition, more than 16 million people in the United States have COPD (chronic obstructive pulmonary disease), which is a major cause of death. Strategies to prevent the disease — like reducing air pollution and helping people quit smoking — are key to reducing deaths from COPD.

Interventions tailored to at-risk groups can also help prevent and treat other respiratory diseases — for example, pneumonia in older adults and pneumoconiosis in coal miners. And increasing lung cancer screening rates can help reduce deaths from lung cancer through early detection and treatment.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Respiratory Disease Deaths

Chronic lower respiratory diseases (CLRD) are diseases affecting the lungs; the most deadly of these is chronic obstructive pulmonary disease (COPD), which includes emphysema and chronic bronchitis. Mortality for CLRD is illustrated in the charts that follow.

Pneumonia and influenza mortality is also illustrated. [COUNTY-LEVEL DATA]

Chronic Obstructive Pulmonary Disease (COPD)

“Would you please tell me if you have ever suffered from or been diagnosed with COPD or chronic obstructive pulmonary disease, including bronchitis or emphysema?”

Prevalence of Chronic Obstructive Pulmonary Disease (COPD)

MMC Service Area

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 120]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents with children 0 to 17 in the household.
- Includes children who have ever been diagnosed with asthma and are reported to still have asthma.

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 23]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
- Includes those having ever suffered from or been diagnosed with COPD or chronic obstructive pulmonary disease, including bronchitis or emphysema.
Key Informant Input: Respiratory Disease

The following chart outlines key informants’ perceptions of the severity of Respiratory Disease as a problem in the community:

### Perceptions of Respiratory Diseases
**as a Problem in the Community**
*(Key Informants, 2022)*

- **Major Problem**: 18.8%
- **Moderate Problem**: 62.5%
- **Minor Problem**: 12.5%
- **No Problem At All**: 6.3%

**Sources:** PRC Online Key Informant Survey, PRC, Inc.

**Notes:** Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Tobacco Use**
- Too many people still smoke. – Community/Business Leader (Northern and Central New Jersey)

**Prevalence of Respiratory Diseases**
- COVID-19, and emphysema, asthma statistics. – Public Health Representative (Essex and Passaic Counties)

**Environmental Contributors**
- Our area of New Jersey is close to major highways and cities with high pollutant rates, as per recent articles published in the Star Ledger. – Public Health Representative (Essex and Passaic Counties)

**Coronavirus Disease/COVID-19**

### Age-Adjusted Coronavirus Disease/COVID-19 Deaths

The 2020 age-adjusted mortality rate for coronavirus disease/COVID-19 is illustrated in the following chart. [COUNTY-LEVEL DATA]

**COVID-19: Age-Adjusted Mortality**
*(2020 Age-Adjusted Deaths per 100,000 Population)*

**Sources:** CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2022.
COVID-19 Vaccination

“Would you please tell me which of the following statements best describes you: I am vaccinated for COVID-19; I plan to receive the vaccine; I do not plan to receive the vaccine; I haven’t decided whether or not to receive the vaccine.”

Prevalence of COVID-19 Vaccination
(MMC Service Area, 2022)

- Fully or Partially Vaccinated: 9.5%
- Don't Plan to Get Vaccinated: 2.4%
- Haven't Decided: 2.7%
- Plan to Get Vaccination: 85.4%

Key Informant Input: Coronavirus Disease/COVID-19
The following chart outlines key informants’ perceptions of the severity of Coronavirus Disease/COVID-19 as a problem in the community:

Perceptions of Coronavirus Disease/COVID-19
as a Problem in the Community
(Key Informants, 2022)

- Major Problem: 25.7%
- Moderate Problem: 40.0%
- Minor Problem: 17.1%
- No Problem At All: 17.1%

Among those rating this issue as a “major problem,” reasons related to the following:

Prevalence/Incidence

- The rate of death diagnoses as per NJ government information. – Health Provider (Northern and Central New Jersey)
- Once again, case is arising in though it appears we are past the worst, people are still getting COVID. – Physician (Essex and Passaic Counties)
For much of the duration of the pandemic, Essex County experienced high case numbers, especially for frontline workers. University Hospital eventually received some staffing support from the National Guard. We also know that communities of color within the county suffered disproportionately higher rates of disease. – Public Health Representative (Essex and Passaic Counties)

Currently still dealing with a moderate case load. Probably underreported now as residents are doing home tests. – Public Health Representative (Essex and Passaic Counties)

Still causing death, disability, and fear. – Physician (Essex and Passaic Counties)

We were part of an epicenter at the outset of the disease in this country in early 2020. – Community/Business Leader (Essex and Passaic Counties)

Awareness/Education

Inaccurate information, language barriers (many people speak/read dialects of the Spanish language), fear, requirements to work or no pay so people go to work even though they are sick, have been exposed, or other colleagues are sick. Large new American population in UC without access to resources. – Health Provider (Northern and Central New Jersey)

High levels of transmission at the start. Misinformation about spread, prevention and treatment. – Social Service Provider (Essex and Passaic Counties)

Vaccination Rates

Folks believe the vaccine was rolled out too fast, so they won’t get the shot, or they believe it will harm their reproductive system. – Public Health Representative (Essex and Passaic Counties)
Injury & Violence

ABOUT INJURY & VIOLENCE

INJURY ► In the United States, unintentional injuries are the leading cause of death in children, adolescents, and adults younger than 45 years. ...Many unintentional injuries are caused by motor vehicle crashes and falls, and many intentional injuries involve gun violence and physical assaults. Interventions to prevent different types of injuries are key to keeping people safe in their homes, workplaces, and communities.

Drug overdoses are now the leading cause of injury deaths in the United States, and most overdoses involve opioids. Interventions to change health care providers’ prescribing behaviors, distribute naloxone to reverse overdoses, and provide medications for addiction treatment for people with opioid use disorder can help reduce overdose deaths involving opioids.

VIOLENCE ► Almost 20,000 people die from homicide every year in the United States, and many more people are injured by violence. ...Many people in the United States experience physical assaults, sexual violence, and gun-related injuries. Adolescents are especially at risk for experiencing violence. Interventions to reduce violence are needed to keep people safe in their homes, schools, workplaces, and communities.

Children who experience violence are at risk for long-term physical, behavioral, and mental health problems. Strategies to protect children from violence can help improve their health and well-being later in life.

– Healthy People 2030 (https://health.gov/healthypeople)

Leading Causes of Unintentional Injury Deaths

Leading causes of accidental death in the area include the following: [COUNTY-LEVEL DATA]

Sources: CDC WONDER Online Query System, Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2022.

Intentional Injury (Violence)

Age-Adjusted Homicide Deaths

Age-adjusted mortality attributed to homicide is shown in the following chart. [COUNTY-LEVEL DATA]

Homicide: Age-Adjusted Mortality Trends
(Annual Average Deaths per 100,000 Population)

Healthy People 2030 = 5.5 or Lower

Sources: CDC WONDER Online Query System, Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted June 2022.

Violent Crime

Violent crime is composed of four offenses (FBI Index offenses): murder and non-negligent manslaughter; forcible rape; robbery; and aggravated assault.

Note that the quality of crime data can vary widely from location to location, depending on the consistency and completeness of reporting among various jurisdictions. [COUNTY-LEVEL DATA]

**Violent Crime**

(Rate per 100,000 Population, 2014-2016)

Sources: Federal Bureau of Investigation, FBI Uniform Crime Reports.

Notes:
- This indicator reports the rate of violent crime offenses reported by the sheriff's office or county police department per 100,000 residents. Violent crime includes homicide, rape, robbery, and aggravated assault. This indicator is relevant because it assesses community safety.
- Participation by law enforcement agencies in the UCR program is voluntary. Sub-state data do not necessarily represent an exhaustive list of crimes due to gaps in reporting. Also, some institutions of higher education have their own police departments, which handle offenses occurring within campus grounds; these offenses are not included in the violent crime statistics but can be obtained from the Uniform Crime Reports Universities and Colleges data tables.

**VIOLENT CRIME EXPERIENCE**

“Have you been the victim of a violent crime in your area in the past 5 years?”

**Victim of a Violent Crime in the Past Five Years**

(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 38]
2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
INTIMATE PARTNER VIOLENCE ► “The next question is about violence in relationships with an intimate partner. By an intimate partner, I mean any current or former spouse, boyfriend, or girlfriend. Someone you were dating, or romantically or sexually intimate with, would also be considered an intimate partner. Has an intimate partner ever hit, slapped, pushed, kicked, or hurt you in any way?”

Have Ever Been Hit, Slapped, Pushed, Kicked, or Hurt in Any Way by an Intimate Partner

Key Informant Input: Injury & Violence

The following chart outlines key informants’ perceptions of the severity of Injury & Violence as a problem in the community:

Perceptions of Injury and Violence as a Problem in the Community (Key Informants, 2022)

- **Major Problem**
  - 16.1%
- **Moderate Problem**
  - 51.6%
- **Minor Problem**
  - 25.8%
- **No Problem At All**
  - 6.5%

Among those rating this issue as a “major problem,” reasons related to the following:

**Prevalence/Incidence**
- Levels of crime in urban areas that result in injuries. – Social Service Provider (Essex and Passaic Counties)

**Gun Violence**
- There have been reports of random and not so random shootings in our local communities. – Public Health Representative (Essex and Passaic Counties)
Gang Violence

Gang and gun violence, limited education in injury prevention of children. – Health Provider (Northern and Central New Jersey)

Co-Occurrences

Mental health issues, individuals off their medications can be violent and cause harm to others. – Public Health Representative (Essex and Passaic Counties)

Diabetes

ABOUT DIABETES

More than 30 million people in the United States have diabetes, and it’s the seventh leading cause of death. …Some racial/ethnic minorities are more likely to have diabetes. And many people with diabetes don’t know they have it.

Poorly controlled or untreated diabetes can lead to leg or foot amputations, vision loss, and kidney damage. But interventions to help people manage diabetes can help reduce the risk of complications. In addition, strategies to help people who don’t have diabetes eat healthier, get physical activity, and lose weight can help prevent new cases.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Diabetes Deaths

Age-adjusted diabetes mortality for the area is shown in the following chart. [COUNTY-LEVEL DATA]

</table>

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Awareness/Education**
- Limited access to information, healthy food, recipes, for low income and new American residents. – Health Provider (Northern and Central New Jersey)
- Lack of resources for medication, lack of education about the disease. – Social Service Provider (Essex and Passaic Counties)
- Education on nutrition, diet, and exercise. – Public Health Representative (Essex and Passaic Counties)

**Lifestyle**
- Ability to maintain a healthy lifestyle that addresses the varying stages and impact of diabetes. – Social Service Provider (Essex and Passaic Counties)
- As a nation, we are slowly becoming more active and interested in staying active and eating healthy diets, but we have such access to unhealthy foods and large portions. Too many in our community live sedentary lives. – Community/Business Leader (Northern and Central New Jersey)
- Lifestyle management, folks are not as healthy and are becoming obese which has led to many people being pre-diabetic. – Community/Business Leader (Essex and Passaic Counties)

**Nutrition**
- Poor eating habits. Lack of access to good, professional health care. – Community/Business Leader (Essex and Passaic Counties)

**Prevalence/Incidence**
- Very prominent in the community and often goes poorly controlled, which leads to a host of cardiovascular consequences. – Physician (Essex and Passaic Counties)

**Access to Care/Services**
- Access to certified diabetes educator coaches. Depending on income access to healthy nutrition choices – Health Provider (Essex and Passaic Counties)

**Affordable Care/Services**
- Affordable access to care and insulin. – Public Health Representative (Essex and Passaic Counties)
Kidney Disease

ABOUT KIDNEY DISEASE

More than 1 in 7 adults in the United States may have chronic kidney disease (CKD), with higher rates in low-income and racial/ethnic minority groups. And most people with CKD don’t know they have it. …People with CKD are more likely to have heart disease and stroke — and to die early. Managing risk factors like diabetes and high blood pressure can help prevent or delay CKD. Strategies to make sure more people with CKD are diagnosed early can help people get the treatment they need.

Recommended tests can help identify people with CKD to make sure they get treatments and education that may help prevent or delay kidney failure and end-stage kidney disease (ESKD). In addition, strategies to make sure more people with ESKD get kidney transplants can increase survival rates and improve quality of life.

- Unmanaged diabetes often leads to kidney disease. – Public Health Representative (Essex and Passaic Counties)
Potentially Disabling Conditions

Multiple Chronic Conditions
The following charts outline the prevalence of multiple chronic conditions among surveyed adults, taking into account all of the various conditions measured in the survey.

Number of Current Chronic Conditions
(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 123]
Notes: Asked of all respondents.
In this case, chronic conditions include lung disease, cancer, kidney disease, heart attack/angina, stroke, asthma, high blood pressure, high blood cholesterol, diabetes, high-impact chronic pain, obesity, and/or diagnosed depression.

Currently Have Three or More Chronic Conditions
(MMC Service Area, 2022)

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 123]
Notes: Asked of all respondents.
In this case, chronic conditions include lung disease, cancer, kidney disease, heart attack/angina, stroke, asthma, high blood pressure, high blood cholesterol, diabetes, high-impact chronic pain, obesity, and/or diagnosed depression.
Activity Limitations

ABOUT DISABILITY & HEALTH

Studies have found that people with disabilities are less likely to get preventive health care services they need to stay healthy. Strategies to make health care more affordable for people with disabilities are key to improving their health.

In addition, people with disabilities may have trouble finding a job, going to school, or getting around outside their homes. And they may experience daily stress related to these challenges. Efforts to make homes, schools, workplaces, and public places easier to access can help improve quality of life and overall well-being for people with disabilities.

– Healthy People 2030 (https://health.gov/healthypeople)

“Are you limited in any way in any activities because of physical, mental, or emotional problems?”

[Adults with activity limitations] “What is the major impairment or health problem that limits you?”

Limited in Activities in Some Way
Due to a Physical, Mental, or Emotional Problem

Most common conditions:
• Back/neck problems
• Mental health
• Eye/vision problem
• Arthritis
• Bone/joint injury
• Difficulty walking

Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Impact on Quality of Life**
- Impact quality of life, functional status, and family relationships. – Health Provider (Essex and Passaic Counties)
- Chronic pain can be so severe they can’t leave the house or afford medication. – Public Health Representative (Essex and Passaic Counties)

**Prevalence/Incidence**
- Back injuries are very common, unfortunately. Many people suffer from arthritis, fibromyalgia, neuropathies, etc... which limits their ability to socialize, work consistently, food shop, chores, etc... I don’t feel it is more prevalent in our community but is an issue not often addressed. – Public Health Representative (Essex and Passaic Counties)

**Lack of Providers**
- We don’t have enough specialists interested in pain management who will help with medicine management. Patients are having problems with continuity with providers who will see them over time to manage their chronic pain. – Physician (Essex and Passaic Counties)
Alzheimer's Disease

ABOUT DEMENTIA

Alzheimer’s disease is the most common cause of dementia and the sixth leading cause of death in U.S. adults. Nearly 6 million people in the United States have Alzheimer’s, and that number will increase as the population ages.

Dementia refers to a group of symptoms that cause problems with memory, thinking, and behavior. People with dementia are more likely to be hospitalized, and dementia is linked to high health care costs.

While there’s no cure for Alzheimer’s disease, early diagnosis and supportive care can improve quality of life. And efforts to make sure adults with symptoms of cognitive decline — including memory loss — are diagnosed early can help improve health outcomes in people with dementia. Interventions to address caregiving needs can also help improve health and well-being in people with dementia.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Alzheimer’s Disease Deaths

Age-adjusted Alzheimer’s disease mortality is outlined in the following chart. [COUNTY-LEVEL DATA]

Key Informant Input: Dementia/Alzheimer’s Disease

The following chart outlines key informants’ perceptions of the severity of Dementia, Including Alzheimer’s Disease as a problem in the community:

Perceptions of Dementia/Alzheimer’s Disease as a Problem in the Community
(Key Informants, 2022)

- Major Problem
- Moderate Problem
- Minor Problem
- No Problem At All

21.9% 62.5% 3.1% 12.5%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Aging Population

Senior citizens fear getting treatment and sometimes are not able to communicate with family members. – Public Health Representative (Essex and Passaic Counties)

Aging population. – Social Service Provider (Essex and Passaic Counties)

As the population becomes more elderly, the prevalence of Alzheimer’s disease will increase. We still do not have any effective treatment, and more research needs to be done. – Physician (Essex and Passaic Counties)

Prevalence/Incidence

Dementia, Alzheimer’s issues presenting at younger ages and with complex physical co-existing conditions, insufficient home health care support. Expensive care. – Social Service Provider (Essex and Passaic Counties)

Access to Care/Services

Access to services and informal caregiver support. – Health Provider (Essex and Passaic Counties)

Impact on Quality of Life

I think it’s a major problem because it’s an illness that is really on the shoulders of family members to handle. There just aren’t enough resources for people or the cost is very high. – Community/Business Leader (Northern and Central New Jersey)

Diagnosis/Treatment

Dementia, Alzheimer’s is not diagnosed, treated among the new Americans. They often don’t have the resources to take seniors to doctors for diagnosis or treatment. Information in culturally and linguistically appropriate formats is limited. – Health Provider (Northern and Central New Jersey)
Caregiving

“People may provide regular care or assistance to a friend or family member who has a health problem, long-term illness, or disability. During the past 30 days, did you provide any such care or assistance to a friend or family member?”

[Among those providing care] “What is the main health problem, long-term illness, or disability that the person you care for has?”

Act as Caregiver to a Friend or Relative with a Health Problem, Long-Term Illness, or Disability

The top health issues affecting those receiving their care include:
- Old age/frailty
- Cancer
- Diabetes
- Heart disease
- Mental illness

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Items 98-99]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
ABOUT INFANT HEALTH

Keeping infants healthy starts with making sure women get high-quality care during pregnancy and improving women’s health in general. After birth, strategies that focus on increasing breastfeeding rates and promoting vaccinations and developmental screenings are key to improving infants’ health. Interventions that encourage safe sleep practices and correct use of car seats can also help keep infants safe.

The infant mortality rate in the United States is higher than in other high-income countries, and there are major disparities by race/ethnicity. Addressing social determinants of health is critical for reducing these disparities.

– Healthy People 2030 (https://health.gov/healthypeople)

Prenatal Care

Early and continuous prenatal care is the best assurance of infant health. Lack of timely prenatal care (care initiated during the first trimester of pregnancy) is outlined in the following chart. [COUNTY-LEVEL DATA]

<table>

Sources: CDC WONDER Online Query System. Centers for Disease Control and Prevention, National Center for Health Statistics, Division of Vital Statistics. Data extracted June 2022.

Note: This indicator reports the percentage of women who do not obtain prenatal care during their first trimester of pregnancy. This indicator is relevant because engaging in prenatal care decreases the likelihood of maternal and infant health risks. This indicator can also highlight a lack of access to preventive care, a lack of health, knowledge insufficient provider outreach, and/or social barriers preventing utilization of services.
Birth Outcomes & Risks

Low-Weight Births

Low birthweight babies, those who weigh less than 2,500 grams (5 pounds, 8 ounces) at birth, are much more prone to illness and neonatal death than are babies of normal birthweight. Largely a result of receiving poor or inadequate prenatal care, many low-weight births and the consequent health problems are preventable. [COUNTY-LEVEL DATA]

Low-Weight Births
(Percent of Live Births, 2014-2020)

9.5% 7.9% 8.0% 8.2%
MMC HMH NJ US

Infant Mortality

Infant mortality rates reflect deaths of children less than one year old per 1,000 live births. These rates are outlined in the following chart. [COUNTY-LEVEL DATA]

Infant Mortality Trends
(Annual Average Infant Deaths per 1,000 Live Births)
Healthy People 2030 = 5.0 or Lower

MMC 5.8 6.2 6.6 6.5 6.1 5.7 5.6 5.1
HMH 4.5 4.4 4.5 4.4 4.5 4.2 4.2 4.0
NJ 4.7 4.4 4.5 4.4 4.4 4.1 4.2 4.0
US 6.0 5.9 5.9 5.9 5.8 5.7 5.6 5.5

Sources: CDC WONDER Online Query System. Centers for Disease Control and Prevention, National Center for Health Statistics, Division of Vital Statistics. Data extracted June 2022.
Note: This indicator reports the percentage of total births that are low birth weight (Under 2500g). This indicator is relevant because low birthweight infants are at high risk for health problems. This indicator can also highlight the existence of health disparities.
Family Planning

ABOUT FAMILY PLANNING

Nearly half of pregnancies in the United States are unintended, and unintended pregnancy is linked to many negative outcomes for both women and infants. …Unintended pregnancy is linked to outcomes like preterm birth and postpartum depression. Interventions to increase use of birth control are critical for preventing unintended pregnancies. Birth control and family planning services can also help increase the length of time between pregnancies, which can improve health for women and their infants.

Adolescents are at especially high risk for unintended pregnancy. Although teen pregnancy and birth rates have gone down in recent years, close to 200,000 babies are born to teen mothers every year in the United States. Linking adolescents to youth-friendly health care services can help prevent pregnancy and sexually transmitted infections in this age group.

- Healthy People 2030 (https://health.gov/healthypeople)

Births to Adolescent Mothers

The following chart describes births to adolescent mothers under the age of 20 years. [COUNTY-LEVEL DATA]

Teen Birth Rate
(Births to Adolescents Age 15-19 per 1,000 Females Age 15-19, 2014-2020)

Sources: 
- Centers for Disease Control and Prevention, National Vital Statistics System.

Notes:
- This indicator reports the rate of total births to women under the age of 15–19 per 1,000 female population age 15–19. This indicator is relevant because in many cases, teen parents have unique social, economic, and health support services. Additionally, high rates of teen pregnancy may indicate the prevalence of unsafe sex practices.
Key Informant Input: Infant Health & Family Planning

The following chart outlines key informants’ perceptions of the severity of Infant Health and Family Planning as a problem in the community:

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Awareness/Education**
- Limited information and resources for new Americans and, or low-income residents. – Health Provider (Northern and Central New Jersey)
- Plan parent centers are very informative facilities. – Public Health Representative (Essex and Passaic Counties)

**Health Disparities**
- High maternal and infant mortality in Essex County due to racial and economic disparities. – Social Service Provider (Essex and Passaic Counties)
- NJ has a dismal rate of maternal and infant health disparities, which were most likely exacerbated by the pandemic. This was also highlighted in the most recent Clifton Health Needs Assessment. – Public Health Representative (Essex and Passaic Counties)

**Income/Poverty**
- Not in our community but certainly in Essex County where there is much poverty and need to work therefore missing MD appointments. In addition to other related issue of poverty. – Public Health Representative (Essex and Passaic Counties)

**Vulnerable Populations**
- Maternal child morbidity, especially among black women. – Health Provider (Essex and Passaic Counties)
MODIFIABLE HEALTH RISKS

Nutrition

ABOUT NUTRITION & HEALTHY EATING

Many people in the United States don’t eat a healthy diet. … People who eat too many unhealthy foods — like foods high in saturated fat and added sugars — are at increased risk for obesity, heart disease, type 2 diabetes, and other health problems. Strategies and interventions to help people choose healthy foods can help reduce their risk of chronic diseases and improve their overall health.

Some people don’t have the information they need to choose healthy foods. Other people don’t have access to healthy foods or can’t afford to buy enough food. Public health interventions that focus on helping everyone get healthy foods are key to reducing food insecurity and hunger and improving health.

– Healthy People 2030 (https://health.gov/healthypeople)

Daily Recommendation of Fruits/Vegetables

To measure fruit and vegetable consumption, survey respondents in the MMC Service Area were asked multiple questions, specifically about the foods and drinks they consumed on the day prior to the interview.

“For the following questions, please think about the foods you ate or drank yesterday. Include all the foods you ate, both at home and away from home. How many servings of fruit or fruit juices did you have yesterday?”

“How many servings of vegetables did you have yesterday?”

The questions above are used to calculate daily fruit/vegetable consumption for respondents. The proportion reporting having 5 or more servings per day is shown here.

Consume Five or More Servings of Fruits/Vegetables Per Day

MMC Service Area

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 125]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
- For this issue, respondents were asked to recall their food intake on the previous day.
Access to Fresh Produce

“How difficult is it for you to buy fresh produce like fruits and vegetables at a price you can afford? Would you say: very difficult, somewhat difficult, not too difficult, or not at all difficult?”

Find It “Very” or “Somewhat” Difficult to Buy Affordable Fresh Produce
(MMC Service Area, 2022)

Low food access is defined as living more than ½ mile from the nearest supermarket, supercenter, or large grocery store. This related chart is based on US Department of Agriculture data. [COUNTY-LEVEL DATA]

Population With Low Food Access
(Percent of Population That Is Far From a Supermarket or Large Grocery Store, 2019)

Sources:  

Notes:  
This indicator reports the percentage of the population with low food access. Low food access is defined as living more than ½ mile from the nearest supermarket, supercenter, or large grocery store. This indicator is relevant because it highlights populations and geographies facing food insecurity.
Physical Activity

ABOUT PHYSICAL ACTIVITY

Physical activity can help prevent disease, disability, injury, and premature death. The Physical Activity Guidelines for Americans lays out how much physical activity children, adolescents, and adults need to get health benefits. Although most people don’t get the recommended amount of physical activity, it can be especially hard for older adults and people with chronic diseases or disabilities.

Strategies that make it safer and easier to get active — like providing access to community facilities and programs — can help people get more physical activity. Strategies to promote physical activity at home, at school, and at childcare centers can also increase activity in children and adolescents.

– Healthy People 2030 (https://health.gov/healthypeople)

Leisure-Time Physical Activity

“During the past month, other than your regular job, did you participate in any physical activities or exercises, such as running, calisthenics, golf, gardening, or walking for exercise?”

No Leisure-Time Physical Activity in the Past Month
Healthy People 2030 = 21.2% or Lower

MMC Service Area

- Behavioral Risk Factor Surveillance System Survey Data. Atlanta, Georgia. United States Department of Health and Human Services, Centers for Disease Control and Prevention (CDC); 2021 New Jersey data.
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
Meeting Physical Activity Recommendations

ADULTS: RECOMMENDED LEVELS OF PHYSICAL ACTIVITY

Adults should do 2 hours and 30 minutes a week of moderate-intensity (such as walking), or 1 hour and 15 minutes (75 minutes) a week of vigorous-intensity aerobic physical activity (such as jogging), or an equivalent combination of moderate- and vigorous-intensity aerobic physical activity. The guidelines also recommend that adults do muscle-strengthening activities, such as push-ups, sit-ups, or activities using resistance bands or weights. These activities should involve all major muscle groups and be done on two or more days per week.

The report finds that nationwide nearly 50 percent of adults are getting the recommended amounts of aerobic activity and about 30 percent are engaging in the recommended muscle-strengthening activity.

www.cdc.gov/physicalactivity

To measure physical activity frequency, duration, and intensity, respondents were asked:

“During the past month, what type of physical activity or exercise did you spend the most time doing?”

“And during the past month, how many times per week or per month did you take part in this activity?”

“And when you took part in this activity, for how many minutes or hours did you usually keep at it?”

Respondents could answer the above series for up to two types of physical activity. The specific activities identified (e.g., jogging, basketball, treadmill, etc.) determined the intensity values assigned to that respondent when calculating total aerobic physical activity hours/minutes.

Respondents were also asked about strengthening exercises:

“During the past month, how many times per week or per month did you do physical activities or exercises to strengthen your muscles? Do not count aerobic activities like walking, running, or bicycling. Please include activities using your own body weight, such as yoga, sit-ups, or push-ups, and those using weight machines, free weights, or elastic bands.”

“Meeting physical activity recommendations” includes adequate levels of both aerobic and strengthening activity:

- Aerobic activity is at least 150 minutes per week of light to moderate activity, 75 minutes per week of vigorous physical activity, or an equivalent combination of both;
- Strengthening activity is at least 2 sessions per week of exercise designed to strengthen muscles.
Meets Physical Activity Recommendations
(MMC Service Area, 2022)
Healthy People 2030 = 28.4% or Higher

Screen Time for Entertainment

[Adults] “Including television, video games, computers, phones, tablets, and the internet, on an average day, about how many hours or minutes of screen time do you use for entertainment?”

3+ Hours of Screen Time for Entertainment

  ● Asked of all respondents with children age 2-17 at home.
  ● Includes children reported to have one or more hours of physical activity on each of the seven days preceding the survey.
Weight Status

ABOUT OVERWEIGHT & OBESITY

Obesity is linked to many serious health problems, including type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to have obesity, which increases their risk of chronic diseases.

Culturally appropriate programs and policies that help people eat nutritious foods within their calorie needs can reduce overweight and obesity. Public health interventions that make it easier for people to be more physically active can also help them maintain a healthy weight.

– Healthy People 2030 (https://health.gov/healthypeople)

Body Mass Index (BMI), which describes relative weight for height, is significantly correlated with total body fat content. The BMI should be used to assess overweight and obesity and to monitor changes in body weight. In addition, measurements of body weight alone can be used to determine efficacy of weight loss therapy. BMI is calculated as weight (kg)/height squared (m²). To estimate BMI using pounds and inches, use: [weight (pounds)/height squared (inches²)] x 703.

In this report, overweight is defined as a BMI of 25.0 to 29.9 kg/m² and obesity as a BMI ≥30 kg/m². The rationale behind these definitions is based on epidemiological data that show increases in mortality with BMIs above 25 kg/m². The increase in mortality, however, tends to be modest until a BMI of 30 kg/m² is reached. For persons with a BMI ≥30 kg/m², mortality rates from all causes, and especially from cardiovascular disease, are generally increased by 50 to 100 percent above that of persons with BMIs in the range of 20 to 25 kg/m².

Notes: Based on reported heights and weights, asked of all respondents.

The definition of obesity is having a body mass index (BMI), a ratio of weight to height (kilograms divided by meters squared), greater than or equal to 30.0, regardless of gender.

Children’s Weight Status

ABOUT WEIGHT STATUS IN CHILDREN & TEENS

In children and teens, body mass index (BMI) is used to assess weight status – underweight, healthy weight, overweight, or obese. After BMI is calculated for children and teens, the BMI number is plotted on the CDC BMI-for-age growth charts (for either girls or boys) to obtain a percentile ranking. Percentiles are the most commonly used indicator to assess the size and growth patterns of individual children in the United States. The percentile indicates the relative position of the child’s BMI number among children of the same sex and age.

BMI-for-age weight status categories and the corresponding percentiles are shown below:

- Underweight: < 5th percentile
- Healthy Weight: ≥5th and < 85th percentile
- Overweight: ≥85th and < 95th percentile
- Obese: ≥ 95th percentile

– Centers for Disease Control and Prevention

The following questions were used to calculate a BMI value (and weight classification as noted above) for each child represented in the survey:

“How much does this child weigh without shoes?”

“About how tall is this child?”
Prevalence of Overweight in Children
(Parents of Children Age 5-17)

Sources:  2022 PRC Community Health Survey, PRC, Inc. [Item 131]
2020 PRC National Health Survey, PRC, Inc.

Notes:  Asked of all respondents with children age 5-17 at home.
Overweight among children is determined by children's Body Mass Index status at or above the 85th percentile of US growth charts by gender and age.

Key Informant Input: Nutrition, Physical Activity & Weight

The following chart outlines key informants’ perceptions of the severity of Nutrition, Physical Activity & Weight as a problem in the community:

Perceptions of Nutrition, Physical Activity, and Weight
as a Problem in the Community
(Key Informants, 2022)

Major Problem
Moderate Problem
Minor Problem
No Problem At All

35.3% 52.9% 8.8% 2.9%

Sources:  PRC Online Key Informant Survey, PRC, Inc.
Notes:  Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Awareness/Education

Senior citizen health, not enough education, or guidance for adults as they grow older concerning health, physical activity, food consumption, stress. General overall change in many functions of the body and brain. – Health Provider (Northern and Central New Jersey)
Lack of care by too many individuals. Advertisements that do not give the real problems caused by unhealthy food intake. – Health Provider (Northern and Central New Jersey)
People don't realize or take seriously what problems can develop if they aren't mindful of nutrition, physical activity, and weight until it's too late. – Community/Business Leader (Northern and Central New Jersey)

Access to Affordable Healthy Food

Access and cost of health foods, uninsured. – Public Health Representative (Essex and Passaic Counties)
Individuals on a limited income cannot afford healthy foods. There was a food desert in Montclair that was created when the Pathmark closed has exacerbated this problem. – Public Health Representative (Essex and Passaic Counties)
Obesity
There is an epidemic of obesity in this area as well as the entire country with poor nutrition and poor exercise which is putting a tremendous strain on the health care system due to the complications of obesity. – Physician (Essex and Passaic Counties)

Obesity is a major issue in the new American and low-income communities. Limited play area, limited resources to buy healthy food. – Health Provider (Northern and Central New Jersey)

Nutrition
People are on the go. Parents who feed their children are on the go. However, the fast food, quick recipes are all unhealthy. Cost of fruits, vegetables and grains is much higher. – Public Health Representative (Essex and Passaic Counties)

Lifestyle
Our community is becoming less active and are not eating as healthy as they should. Covid has proven that the individuals who were overweight and made poor lifestyle choices were more at risk to hospitalization and death. – Community/Business Leader (Essex and Passaic Counties)

Access to Care/Services
Access to care and reimbursement for services. – Health Provider (Essex and Passaic Counties)

Substance Abuse

ABOUT DRUG & ALCOHOL USE
More than 20 million adults and adolescents in the United States have had a substance use disorder in the past year. …Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. Opioid use disorders have become especially problematic in recent years. Substance use disorders are linked to many health problems, and overdoses can lead to emergency department visits and deaths.

Effective treatments for substance use disorders are available, but very few people get the treatment they need. Strategies to prevent substance use — especially in adolescents — and help people get treatment can reduce drug and alcohol misuse, related health problems, and deaths.

– Healthy People 2030 (https://health.gov/healthypeople)

Alcohol

Age-Adjusted Cirrhosis/Liver Disease Deaths
Heavy alcohol use contributes to a significant share of liver disease, including cirrhosis. The following chart outlines age-adjusted mortality for cirrhosis/liver disease in the area. [COUNTY-LEVEL DATA]
Cirrhosis/Liver Disease: Age-Adjusted Mortality Trends
(Annual Average Deaths per 100,000 Population)
Healthy People 2030 = 10.9 or Lower

Notes:
- Excessive drinking reflects the number of persons aged 18 years and over who drank more than two drinks per day on average (for men) or more than one drink per day on average (for women) OR who drank 5 or more drinks during a single occasion (for men) or 4 or more drinks during a single occasion (for women) during the past 30 days.

Drugs

Age-Adjusted Unintentional Drug-Related Deaths

Unintentional drug-related deaths include all deaths, other than suicide, for which drugs are the underlying cause. A “drug” includes illicit or street drugs (e.g., heroin and cocaine), as well as legal prescription and over-the-counter drugs; alcohol is not included. The following chart outlines local age-adjusted mortality for unintentional drug-related deaths. [COUNTY-LEVEL DATA]

Unintentional Drug-Related Deaths:

Illicit Drug Use

“During the past 30 days, have you used an illegal drug or taken a prescription drug that was not prescribed to you?”

“Have you ever sought professional help for an alcohol or drug-related problem?”

Illicit Drug Use in the Past Month
Healthy People 2030 = 12.0% or Lower

4.9% of respondents report that they have sought professional help for an alcohol or drug-related problem at some point in their lives.

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Items 49, 51]
2020 PRC National Health Survey, PRC, Inc.

Notes: Asked of all respondents.

Use of Prescription Opioids

“Opiates or opioids are drugs that doctors prescribe to treat pain. Examples of prescription opiates include morphine, codeine, hydrocodone, oxycodone, methadone, and fentanyl. In the past year, have you used any of these prescription opiates?”

“Have you or has a member of your family ever received treatment for addiction to a prescription medication or been referred by a doctor, nurse, or other health professional for this type of care?”

Used a Prescription Opioid in the Past Year
(MMC Service Area, 2022)

7.7% of respondents report that they or a member of their household have been referred to or treated for an addiction to prescription medications.

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Items 50, 303]
2020 PRC National Health Survey, PRC, Inc.
Notes: Asked of all respondents.

Opioids are a class of drugs used to treat pain. Examples presented to respondents include morphine, codeine, hydrocodone, oxycodone, methadone, and fentanyl. Common brand name opioids include Vicodin, Dilaudid, Percocet, OxyContin, and Demerol.
Personal Impact From Substance Abuse

“Including alcohol, prescription, and other drugs, to what degree has your life been negatively affected by your own or someone else’s substance abuse issues? Would you say: a great deal, somewhat, a little, or not at all?”

Life Has Been Negatively Affected by Substance Abuse (by Self or Someone Else)

(MMC Service Area, 2022)

Key Informant Input: Substance Abuse

The following chart outlines key informants’ perceptions of the severity of Substance Abuse as a problem in the community:

Perceptions of Substance Abuse as a Problem in the Community

(Key Informants, 2022)

- Major Problem
- Moderate Problem
- Minor Problem
- No Problem At All

Among those rating this issue as a “major problem,” reasons related to the following:

Affordable Care/Services

- Cost of care, time to access services, transportation. – Public Health Representative (Essex and Passaic Counties)
- Affordable or free facilities. – Health Provider (Essex and Passaic Counties)
- Lack of wide range of affordable options. – Public Health Representative (Essex and Passaic Counties)
Prevalence/Incidence
As with mental health, there is an epidemic of substance abuse namely alcohol but opioids affecting this community and country. – Physician (Essex and Passaic Counties)
A nationwide problem that is present in all communities. – Public Health Representative (Essex and Passaic Counties)

Denial/Stigma
Denial and lack of awareness of programs. – Community/Business Leader (Essex and Passaic Counties)

Insurance Issues
Practitioners who accept insurance. – Physician (Essex and Passaic Counties)

Easy Access
Easy access to getting substances to abuse. Kids start too early doing drugs, not enough good, safe places to get rehab, especially if you don’t have good insurance. – Community/Business Leader (Northern and Central New Jersey)

Alcoholism
Alcoholism. Many families are impacted. – Community/Business Leader (Essex and Passaic Counties)

Multiple Factors
Addiction, uninsured, not aware of resources. – Public Health Representative (Essex and Passaic Counties)

Tobacco Use

ABOUT TOBACCO USE
More than 16 million adults in the United States have a disease caused by smoking cigarettes, and smoking-related illnesses lead to half a million deaths each year.

Most deaths and diseases from tobacco use in the United States are caused by cigarettes. Smoking harms nearly every organ in the body and increases the risk of heart disease, stroke, lung diseases, and many types of cancer. Although smoking is widespread, it’s more common in certain groups, including men, American Indians/Alaska Natives, people with behavioral health conditions, LGBT people, and people with lower incomes and education levels.

Several evidence-based strategies can help prevent and reduce tobacco use and exposure to secondhand smoke. These include smoke-free policies, price increases, and health education campaigns that target large audiences. Methods like counseling and medication can also help people stop using tobacco.

– Healthy People 2030 (https://health.gov/healthypeople)
Cigarette Smoking

“Do you currently smoke cigarettes every day, some days, or not at all?” ("Current smokers" include those smoking "every day" or on "some days.")

Cigarette Smoking Prevalence
(MMC Service Area, 2022)

![Diagram showing cigarette smoking prevalence]

2020 PRC National Health Survey, PRC, Inc.
Notes: Asked of all respondents.
Includes regular and occasional smokers (those who smoke cigarettes every day or on some days).

Environmental Tobacco Smoke

“In the past 30 days, has anyone, including yourself, smoked cigarettes, cigars or pipes anywhere in your home on an average of four or more days per week?”

The following chart details these responses among the total sample of respondents, as well as among only households with children (age 0-17).
Member of Household Smokes at Home

**MMC Service Area**

- **11.0%** among households with children
- **11.0%** in MMC
- **14.6%** in HMH
- **12.9%** in US

**Sources:**
- 2022 PRC Community Health Survey, PRC, Inc. [Items 43, 134]
- 2019 PRC National Health Survey, PRC, Inc.

**Notes:**
- Asked of all respondents.
- “Smokes at home” refers to someone smoking cigarettes, cigars, or a pipe in the home an average of four or more times per week in the past month.

### Use of Vaping Products

“The next questions are about electronic vaping products, such as electronic cigarettes, also known as e-cigarettes. These are battery-operated devices that simulate traditional cigarette smoking, but do not involve the burning of tobacco. Have you ever used an electronic vaping product, such as an e-cigarette, even just one time in your entire life?”

“Do you now use electronic vaping products, such as e-cigarettes, “every day,” “some days,” or “not at all”?”

“Current use” includes use “every day” or on “some days.”

**Currently Use Vaping Products**

**MMC Service Area, 2022**

**Sources:**
- 2022 PRC Community Health Survey, PRC, Inc. [Item 135]
- 2020 PRC National Health Survey, PRC, Inc.

**Notes:**
- Asked of all respondents.
- Includes regular and occasional users (those who smoke e-cigarettes every day or on some days).
Key Informant Input: Tobacco Use

The following chart outlines key informants’ perceptions of the severity of Tobacco Use as a problem in the community:

### Perceptions of Tobacco Use as a Problem in the Community
(Key Informants, 2022)

- **Major Problem**: 19.4%
- **Moderate Problem**: 58.1%
- **Minor Problem**: 19.4%
- **No Problem At All**: 3.2%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Easy Access**
- Young people are exposed to advertisements encouraging smoking and vaping. Limited information, campaigns against smoking, too easily accessible. Illegally purchased in Bodegas. – Health Provider (Northern and Central New Jersey)
- We have a large number of smoke shops relocating into our city, which caused a huge problem regarding following the new rules issued by the state. We have been conducting tobacco age of sale inspections, and during our re-inspections, we inspected 26 total establishments, 9 failed for selling to minors – 5 were second summons, 11 failed for offering flavors for sale – 10 were second summons (but the 1 was a new establishment that opened in between first and second inspections). There is an increased concern with THC-based products, ex. Delta-8 vape pens, which are not considered flavored vapor products. We are having difficulty determining strain vs. flavors. – Community/Business Leader (Essex and Passaic Counties)

**Teen/Young Adult Usage**
- Because there are still people smoking, and kids are still starting early, especially with vaping. – Community/Business Leader (Northern and Central New Jersey)

**Impact on Quality of Life**
- For those that continue to smoke, the level of smoking has increased to the point of interfering with daily activities and significantly impacting health and quality of life. – Social Service Provider (Essex and Passaic Counties)

**Comorbidities**
- Tobacco is a modifiable risk factor for cardiovascular and lung disease that is improving, but again, the health care costs of complications add to the overall burden of health care. – Physician (Essex and Passaic Counties)

**Impact on Caregivers/Families**
- I don't think it is the level it used to be. Personally, it impacted my family. My mother was a longtime smoker and died of cancer. I'm not a big fan of vaping. – Community/Business Leader (Essex and Passaic Counties)
Sexual Health

HIV

ABOUT HIV & SEXUALLY TRANSMITTED INFECTIONS

Although many sexually transmitted infections (STIs) are preventable, there are more than 20 million estimated new cases in the United States each year — and rates are increasing. In addition, more than 1.2 million people in the United States are living with HIV (human immunodeficiency virus).

Adolescents, young adults, and men who have sex with men are at higher risk of getting STIs. And people who have an STI may be at higher risk of getting HIV. Promoting behaviors like condom use can help prevent STIs.

Strategies to increase screening and testing for STIs can assess people’s risk of getting an STI and help people with STIs get treatment, improving their health and making it less likely that STIs will spread to others. Getting treated for an STI other than HIV can help prevent complications from the STI but doesn’t prevent HIV from spreading.

– Healthy People 2030 (https://health.gov/healthypeople)

The following chart outlines prevalence (current cases, regardless of when they were diagnosed) of HIV per 100,000 population in the area. [COUNTY-LEVEL DATA]

HIV Prevalence
(Prevalence Rate of HIV per 100,000 Population, 2018)

Sources: Centers for Disease Control and Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention.

Notes: This indicator is relevant because HIV is a life-threatening communicable disease that disproportionately affects minority populations and may also indicate the prevalence of unsafe sex practices.

Sexually Transmitted Infections (STIs)

CHLAMYDIA ➤ Chlamydia is the most commonly reported STI in the United States; most people who have chlamydia are unaware, since the disease often has no symptoms.

GONORRHEA ➤ Anyone who is sexually active can get gonorrhea. Gonorrhea can be cured with the right medication; left untreated, however, gonorrhea can cause serious health problems in both women and men.

The following chart outlines local incidence for these STIs. [COUNTY-LEVEL DATA]
Chlamydia & Gonorrhea Incidence
(Incidence Rate per 100,000 Population, 2018)

Notes: • Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Awareness/Education

School-based sex education classes vary in quality, and contraception practices may be cost prohibitive for some. Others may have a lack of health care resources, including preventive sexual health visits. – Public Health Representative (Essex and Passaic Counties)

Prevalence/Incidence

Essex County has a high number of STDs reported. – Public Health Representative (Essex and Passaic Counties)

Sexism

Sexism. – Social Service Provider (Essex and Passaic Counties)
ACCESS TO HEALTH CARE

ABOUT HEALTH CARE ACCESS

Many people in the United States don’t get the health care services they need. …About 1 in 10 people in the United States don’t have health insurance. People without insurance are less likely to have a primary care provider, and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

Sometimes people don’t get recommended health care services, like cancer screenings, because they don’t have a primary care provider. Other times, it’s because they live too far away from health care providers who offer them. Interventions to increase access to health care professionals and improve communication — in person or remotely — can help more people get the care they need.

– Healthy People 2030 (https://health.gov/healthypeople)

Lack of Health Insurance Coverage

Survey respondents in the MMC Service Area were asked a series of questions to determine their health care insurance coverage, if any, from either private or government-sponsored sources.

“Do you have any government-assisted health care coverage, such as Medicare, Medicaid (or another state-sponsored program), or VA/military benefits?”

“Do you currently have: health insurance you get through your own or someone else’s employer or union; health insurance you purchase yourself or get through a health insurance exchange website; or, you do not have health insurance and pay for health care entirely on your own?”

Here, lack of health insurance coverage reflects respondents age 18 to 64 (thus excluding the Medicare population), who have no type of insurance coverage for health care services – neither private insurance nor government-sponsored plans (e.g., Medicaid).
Lack of Health Care Insurance Coverage
(Adults Age 18-64)

Difficulties Accessing Health Care

Barriers to Health Care Access

To better understand health care access barriers, survey participants were asked whether any of the following barriers to access prevented them from seeing a physician or obtaining a needed prescription in the past year.

“Was there a time in the past 12 months when you needed medical care, but had difficulty finding a doctor?”

“Was there a time in the past 12 months when you had difficulty getting an appointment to see a doctor?”

“Was there a time in the past 12 months when you needed to see a doctor, but could not because of the cost?”

“Was there a time in the past 12 months when a lack of transportation made it difficult or prevented you from seeing a doctor or making a medical appointment?”

“Was there a time in the past 12 months when you were not able to see a doctor because the office hours were not convenient?”

“Was there a time in the past 12 months when you needed a prescription medicine, but did not get it because you could not afford it?”

“Was there a time in the past 12 months when you were not able to see a doctor due to language or cultural differences?”

Also:

“Was there a time in the past 12 months when you skipped doses or stretched a needed prescription in order to make your prescriptions last longer and save costs?”

The percentages shown in the following chart reflect the total population, regardless of whether medical care was needed or sought.

Barriers to Access Have Prevented Medical Care in the Past Year

Inconvenient Office Hours 27.6% 22.5% 26.5% Getting a Dr Appointment 17.6% 17.8% 14.5% Finding a Doctor 17.6% 17.8% 14.5% Cost (Doctor Visit) 15.7% 13.7% 13.9% Cost (Prescriptions) 12.8% 12.8% 12.8% Lack of Transportation 12.6% 9.8% 12.6% Language/Culture 3.0% 1.9% 2.8%

<td>17.1%</td>
</tr>
</tbody>
</table>

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Access to Care/Services**

Sandwich generation needing to work and bring parents/elderly persons to MD appointments, but the only appointments available are during work hours. Transportation. Reliance on computer portals for elderly to access to obtain info on their health when the elderly often do not know how to use computers. Not many insurances and/or practices cover virtual visits. Many health care providers register for Medicaid (on paper) but never have availability for new patients, particularly mental health. – Public Health Representative (Essex and Passaic Counties)

Limited information available, difficult applications, literacy challenges, fear of using any type of government-funded programs. – Health Provider (Northern and Central New Jersey)

**Income/Poverty**

Lack of funds, resources and insurance coverage for all. – Social Service Provider (Essex and Passaic Counties)

**Access for Medicare/Medicaid Patients**

Medical providers accepting Medicaid patients, transportation. – Social Service Provider (Essex and Passaic Counties)
Primary Care Services

ABOUT PREVENTIVE CARE

Getting preventive care reduces the risk for diseases, disabilities, and death — yet millions of people in the United States don’t get recommended preventive health care services.

Children need regular well-child and dental visits to track their development and find health problems early, when they’re usually easier to treat. Services like screenings, dental check-ups, and vaccinations are key to keeping people of all ages healthy. But for a variety of reasons, many people don’t get the preventive care they need. Barriers include cost, not having a primary care provider, living too far from providers, and lack of awareness about recommended preventive services.

Teaching people about the importance of preventive care is key to making sure more people get recommended services. Law and policy changes can also help more people access these critical services.

– Healthy People 2030 (https://health.gov/healthypeople)

Access to Primary Care

This indicator is relevant because a shortage of health professionals contributes to access and health status issues.

Access to Primary Care
(Number of Primary Care Physicians per 100,000 Population, 2021)

Sources:  US Department of Health & Human Services, Health Resources and Services Administration, Area Health Resource File.

Notes:  Doctors classified as “primary care physicians” by the AMA include: General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs, and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded. This indicator is relevant because a shortage of health professionals contributes to access and health status issues.
Utilization of Primary Care Services

**ADULTS** ▶ “A routine checkup is a general physical exam, not an exam for a specific injury, illness or condition. About how long has it been since you last visited a doctor for a routine checkup?”

**CHILDREN** ▶ “About how long has it been since this child visited a doctor for a routine checkup or general physical exam, not counting visits for a specific injury, illness, or condition?”

Oral Health

ABOUT ORAL HEALTH

Tooth decay is the most common chronic disease in children and adults in the United States. Regular preventive dental care can catch problems early, when they’re usually easier to treat. But many people don’t get the care they need, often because they can’t afford it. Untreated oral health problems can cause pain and disability and are linked to other diseases.

Strategies to help people access dental services can help prevent problems like tooth decay, gum disease, and tooth loss. Individual-level interventions like topical fluorides and community-level interventions like community water fluoridation can also help improve oral health. In addition, teaching people how to take care of their teeth and gums can help prevent oral health problems.

– Healthy People 2030 (https://health.gov/healthypeople)

Dental Care

ADULTS ► “About how long has it been since you last visited a dentist or a dental clinic for any reason?”

"Do you currently have any health insurance coverage that pays for at least part of your dental care?"

CHILDREN AGE 2-17 ► “About how long has it been since this child visited a dentist or dental clinic?"

Sources:  
- PRC Online Key Informant Survey, PRC, Inc.

Notes:  
- Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Insurance Issues

- Many people that have health insurance do not opt in or have the opportunity for employer based dental insurance. And increasingly, many dentists are not participating in dental health insurance programs. This increases costs to residents across the board. – Public Health Representative (Essex and Passaic Counties)
- Cost is too high for uninsured individuals. Limited access to information and resources for low income and new Americans. – Health Provider (Northern and Central New Jersey)

Access for Medicaid Patients

- Access to dental care for the Medicaid patient. – Social Service Provider (Essex and Passaic Counties)

Affordable Care/Services

- Lack of affordable dental care, especially for children. – Social Service Provider (Essex and Passaic Counties)

Income/Poverty

- Families who struggle will overlook their oral health when they have other more pressing needs. – Public Health Representative (Essex and Passaic Counties)
Perceptions of Local Health Care Services

“How would you rate the overall health care services available to you? Would you say: excellent, very good, good, fair, or poor?”

Perceive Local Health Care Services as “Fair/Poor”

MMC Service Area

Background
In 2019, Hackensack Meridian Health Mountainside Medical Center completed a Community Health Needs Assessment (CHNA) and developed a supporting Community Health Implementation Plan (CHIP) to address identified health priorities. The strategies implemented to address the health priorities reflect Hackensack Meridian Health’s mission and commitment to improving the health and well-being of the community.

Guided by the findings from the 2019 CHNA and input from key community stakeholders, Hackensack Meridian Health leadership identified the following priorities to be addressed by the CHIP:

- Behavioral Health (Mental Health & Substance Abuse)
- Chronic & Complex Conditions
- Wellness & Prevention (Risk Factors)
- Social Determinants of Health & Access to Care

The arrival of COVID-19 shortly after the approval of the CHNA and CHIP shifted the priorities of our community and the world. We swiftly adapted to enact measures to keep staff and patients safe, ensure continuity of care, integrate new technologies and strategies to adjust to the new environment and leverage partnerships to meet emerging needs. The following sections outline our work to impact the priority health needs and respond to COVID-19 in our area.
# Behavioral Health

**Goal:** A community where all residents have access to high quality behavioral health care, and experience mental wellness and recovery

<table>
<thead>
<tr>
<th>Objective</th>
<th>Key Accomplishments / Highlights</th>
</tr>
</thead>
</table>
| Support efforts to reduce stigma associated with mental health and substance use issues | ● 22 behavioral health related social media posts, HealthU articles, podcast episodes, etc. aimed at raising awareness and reducing the stigma associated with mental health and substance use issues  
  ○ 1,761 engagements on behavioral health social media posts, HealthU articles, podcast episodes |
| Continue to provide community education and awareness of substance use/misuse and healthy mental, emotional, and social health | ● 17 behavioral health lectures offered to community members  
  *Topics include: depression, coping with stress, mindfulness, and much more*  
  ○ 392 community members educated  
  ● 1 program offered that aimed to reduce older adult depression and isolation in community-based settings  
  ○ 6 older adults engaged |
| Continue to conduct universal mental health and substance use screening in patient-care and community-based settings | ● 466 patients screened for suicide risk via PHQ-9 MH screening tool who were referred for follow-up  
  ● 2 school-based vaping education programs offered  
  ○ 527 students educated on the facts about e-cigarettes and vaping, the risks and dangers, as well as available resources  
  ● 38 mental health and substance use support groups offered for those with or recovering from mental health or substance use and their family/friends/caregivers  
  ○ 239 patients, family members and caregivers supported  
  ● 420 patients notified about the Drug Take Back program |
| Strengthen existing – and explore new – community partnerships to address mental health and substance use | ● Participated in 30 local and regional health coalitions and task forces to promote collaboration, share knowledge, and coordinate community health improvement efforts around behavioral health issues |
## Chronic & Complex Conditions

**Goal:** All residents will have access to chronic disease education, screening, and management services to achieve an optimal state of wellness

<table>
<thead>
<tr>
<th>Objective</th>
<th>Key Accomplishments / Highlights</th>
</tr>
</thead>
</table>
| **Continue to screen adults for chronic and complex conditions and risk factors in community-based settings, and refer those at-risk to appropriate services** | • **2,185** free preventive health screenings provided in clinical and non-clinical settings through wellness fairs or stand-alone screening events  
  *Screenings provided include: Blood pressure, Bone density, Breast exam, Colorectal, Glucose, HDL, Hearing, Memory, PSA, Pulse, Skin, Stroke Risk, Total Cholesterol, Cancer.*  
  - **662** abnormal results detected. Individuals were referred for follow up  
  • **207** CT calcium score screenings provided at a reduced price |
| **Continue to support community education and awareness of chronic and complex conditions** | • **173** health education lectures provided by physicians and health care providers that focus on chronic and complex conditions  
  - **4,506** community members educated  
  • **3** programs offered through faith-based outreach that focus on engaging diverse communities  
    • **262** individuals educated  
  • **2** septicemia educational programs offered to the community  
    - **288** community members educated on sepsis prevention, identification, and treatment  
  • **12** chronic disease self-management programs offered to community members  
    - **117** community members trained in disease self-management  
  • **72** support groups offered for chronic & complex conditions  
    - **490** patients, family members and caregivers attended  
  • Participated in **50** local and regional coalition and task force meetings to promote collaboration, knowledge, and coordinate community health improvement activities related to chronic and complex conditions |
## Wellness & Prevention (Risk Factors)

<table>
<thead>
<tr>
<th>Objective</th>
<th>Key Accomplishments / Highlights</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Continue to provide education and counseling regarding wellness, health promotion, risk factors, and healthy behaviors</strong></td>
<td></td>
</tr>
</tbody>
</table>
- 70 Body Mass Index (BMI) assessments provided to community members  
  o 52 abnormal results detected. Individuals received counseling and were referred for follow up care  
- 51 wellness and prevention lectures by physicians and health care providers offered to community members  
  *Topics include trauma & injury prevention, balance, healthy eating, exercise, and much more*  
  - 888 community members educated on prevention and wellness  
- 29 wellness and prevention lectures offered to children and teens  
  *Topics include: trauma & injury prevention, self-esteem, safe babysitting and much more*  
  o 499 children and teens educated through wellness and prevention programs  
- 5 Fitness-focused events offered to community members  
  o 434 community members engaged in fitness-focused events  
- 4 Healthy cooking demonstrations offered to community members  
  o 150 community members educated on how to prepare healthy and nutritious recipes  
- 76 children received free dental care at the annual Give Kids A Smile event  
- Participated in 107 coalition/task force meetings to promote collaboration, share knowledge, and coordinate community health improvement activities related to wellness and prevention |
| **Support efforts to improve maternal and infant health** |  
- 1,159 lactating women supported to successfully breastfeed their infants  
- 55 childbirth classes offered to expectant parents to enhance knowledge, skills, and confidence  
  o 829 expectant parents educated |
### Social Determinants of Health & Access to Care

<table>
<thead>
<tr>
<th>Objective</th>

</tr>
</thead>
<tbody>
<tr>
<td>Support plans, programs, and policies that address barriers to achieving</td>
<td>● 3 health care provider lectures related to social determinants of health</td>
</tr>
<tr>
<td>optimal health</td>
<td>○ 345 community members educated</td>
</tr>
<tr>
<td></td>
<td>● Participated in 56 local and regional coalition and task force meetings to promote collaboration, share knowledge, and coordinate community health improvement activities related to social determinants of health</td>
</tr>
<tr>
<td>Support efforts to increase access to low cost healthy foods</td>
<td>● 29 hours employees spent coordinating food donations for a local food pantry</td>
</tr>
<tr>
<td>Support individuals to enroll in health insurance and public assistance</td>
<td>● 1,142 patients assisted in health insurance enrollment</td>
</tr>
<tr>
<td>programs</td>
<td></td>
</tr>
<tr>
<td>Address common barriers to accessing health care</td>
<td>● 2,329 Healthcare provider Telehealth appointments conducted</td>
</tr>
<tr>
<td></td>
<td>● 493 home visits provided by MMC Family Practice Associates to home-bound individuals</td>
</tr>
<tr>
<td></td>
<td>● 3 Residency programs</td>
</tr>
<tr>
<td></td>
<td>○ 150 residents</td>
</tr>
<tr>
<td></td>
<td><em>Residency programs: Family Medicine, Internal Medicine, Dental.</em></td>
</tr>
<tr>
<td></td>
<td>● 17 cultural competency trainings held for hospital clinicians and staff</td>
</tr>

COVID-19 Response
We worked together with local Health Departments and other community partners to meet the needs of the people of our community during the COVID-19 pandemic. We moved swiftly to implement institutional safety measures to protect patients and staff, ensure availability of personal protective equipment (PPE) to maintain continuity of care and respond to emerging demands from COVID-19 in a safe environment for all.

Together with the local partners and others, we quickly provided testing, education, and treatment for COVID-19, and rolled out a mass vaccination campaign in record time once vaccine for COVID-19 became available. Additionally, we have supported patients, staff and the broader community financial assistance, food and medicine, education, and social and emotional support throughout the pandemic. The following section represents some highlights of the wide range of support and actions undertaken by our team in response to the COVID-19 Pandemic.

<table>
<thead>
<tr>
<th>Goal: Pivot hospital resources to address immediate needs of the community as a result of the COVID-19 public health crisis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
</tr>
</tbody>
</table>
| Provide community education and increase awareness of COVID-19 risk factors and prevention, signs and symptoms, and treatment. | The Community Outreach team transitioned all programs to a virtual platform, ensuring the continuation of vital community education  
• **35** lectures provided by physicians and health care providers that focus on COVID-19  
  *Topics include:* Signs and symptoms, treatment, vaccinations, coping with fears, and much more  
  ○ **4,247** community members educated  
  • Collaborated closely with our established partners in the community to disseminate public health information as it rapidly changed, providing materials needed for COVID-19 prevention and overall safety |
| Provide COVID-19 Immunization in patient-care and community-based settings | • Stood up a COVID Vaccination site at the hospital  
  ○ **11,549+** COVID vaccines administered |
| Ensure COVID-19 Response Coordination | • Introduced many new COVID-specific processes that required additional hands  
  *Examples of roles include:* Temperature checker/screen, Fit-testing supervisor, Family Communication Specialist, Contact Tracer, Clinical Helper, Personal Protective Equipment observer, and more |
